

**SUNY Albany**  
**AMAT592 Fall 2022**  
**Machine Learning**

**Instructor:** Felix Ye

**Lectures:** TTh 10:30AM - 11:50AM in Massry Ctr for Business 231.

**Instructor Office Hours:** T 12:30PM-1:20PM, Th 3pm-4pm

**E-Mail Address:** xye2@albany.edu

Email will be a major line of communication between the student and the instructor. I will send urgent announcements and important information via email. Please check your university email regularly.

**Web Page:** Check the course page in blackboard regularly. Homework assignments, course announcements, and grades will be posted there.

**Course Description:** The primary goal is to provide students with the tools and principles needed to solve both the traditional and modern data science problems. In particular, the course covers a wide variety of topics in machine learning. It introduces the key terms, concepts and methods in machine learning, with an emphasis on developing critical analytical skills through hands-on exercises of data analysis tasks. In addition, the students will practice basic programming skills to use software tools in machine learning. The programming language in this course will be Jupyter notebook.

All latest jupyter notebook can be downloaded in <https://github.com/yexf308/MAT592.git>. I will keep updating this git repository as class progresses, so please fetch the update regularly. I will also leave a copy (not most updated) version in blackboard.

Prerequisite: vector calculus, probability, linear Algebra, optimization and some experience on programming.

**Textbook:** Probabilistic Machine Learning: An Introduction

You can download the draft of the latest version: <https://probml.github.io/pml-book/book1.html>. I will loosely follow this book, however, I will put some additional material into it.

**Grading Policy:**

Homework	100%	
Grade distribution:	90%-100%	A
	80%-90%	A-
	70%-80%	B+
	60%-70%	B
	50%-60%	B-
	Others	C, D or E

**Incomplete grade:** This class will not give any incomplete grade. If the work cannot complete in the current semester, the student can choose to retake this class in the following year.

**Homework:** Homework assignments will be assigned every three weeks. There are 5 sets of homework in total.

Late assignment turn-in is not permitted. Any assignment turned in after the deadline will NOT be graded.

**Attendance:** Although attendance will not be taken, I strongly encourage you attend and participate in every lecture. This is one of the best ways to ensure success in the course.

**Academic Misconduct:** The strength of the university depends on academic and personal integrity. In this course, you must be honest and truthful. Ethical violations include cheating on exams, plagiarism, reuse of assignments, improper use of the Internet and electronic devices, unauthorized collaboration, alteration of graded assignments, forgery and falsification, lying, facilitating academic dishonesty, and unfair competition.

In addition, specific ethics guidelines for this course are as follows: Students may discuss homework. However, all solutions MUST be written up and submitted individually. The same rules apply to computer programs. Basic ideas may be discussed but detailed codes should not be copied or shared. Finally, exams must represent the result of individual effort and communication is permitted only with the instructor.

Report any violations you witness to the instructor. You may consult the associate dean of student affairs and/or the chairman of the Ethics Board beforehand.

**Tentative Course Outline and Schedule:**

- Week 1 (Aug 23 & Aug 25): Machine Learning: Overview. Review of Pre-requisite. Homework 1 assigned.
- Week 2 (Aug 30 & Sep 1): Logistic regression.
- Week 3 (Sep 6 & Sep 8): Support Vector Machines.

- Week 4 (Sep 13 & Sep 15): Kernel method. Homework 1 due. Homework 2 assigned.
- Week 5 (Sep 20 & Sep 22): KNN classification. K-means clustering.
- Week 6 (Sep 27 & Sep 29): K-means clustering. Hierarchical clustering.
- Week 7 (Oct 4 & Oct 6): Principal component analysis. Homework 2 due. Homework 3 assigned.
- Week 8 (Oct 13 ): Linear Discriminant Analysis.
- Week 9 (Oct 18 & Oct 20): Linear Discriminant Analysis and Naive bayes classification.
- Week 10 (Oct 25 & Oct 27): Deep Neural Network. Homework 3 due. Homework 4 assigned.
- Week 11 (Nov 1 & Nov 3): Deep Neural Network.
- Week 12 (Nov 8 & Nov 10): Regularization and Optimization in Deep Learning. Homework 4 due. Homework 5 assigned.
- Week 13 (Nov 15 & Nov 17): Autoencoder.
- Week 14 (Nov 22 ): Autoencoder.
- Week 15 (Nov 29 & Dec 1): Generative adversarial network. Homework 5 due.
